somfy.

Welcome to a new dimension

Now you can enjoy the convenience of a powered roller blind, without any wiring, that you can operate simply and easily by remote control.

Enhance your lifestyle

From the comfort of your seat, press a button on your remote control. Close your blind to protect your privacy, open it fully to let in daylight, or position it at your preferred intermediate position to provide partial shading.

>Safety

Low voltage motors are known to be safe and motorisation means there are no cords dangling from the blind

>Style

As it is operated gently and evenly each time by the motor, your blind will look good for longer

>Comfort

Achieve the light level and warmth you want in your room, without having to get up to adjust your blind

>Convenience

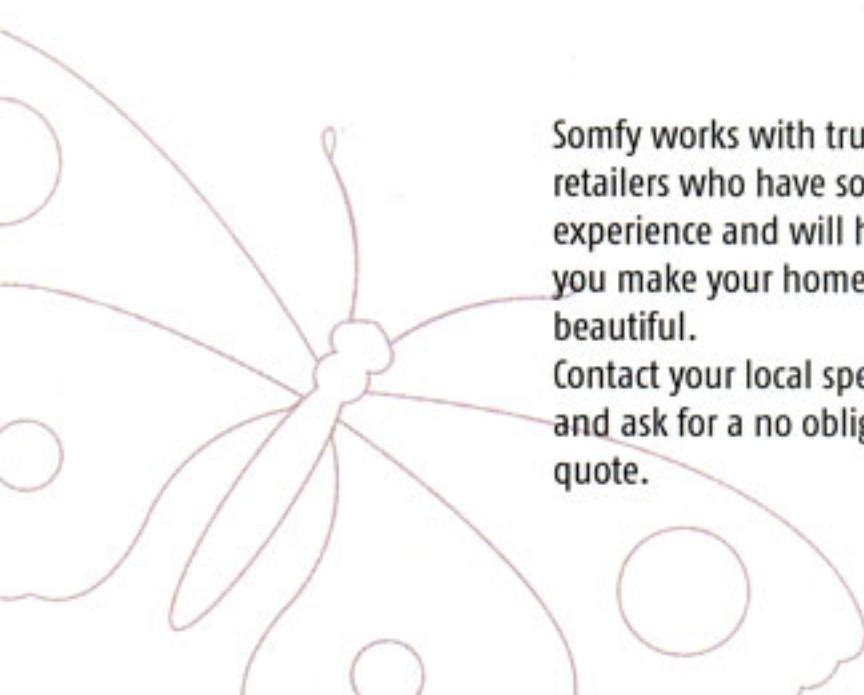

Just a press on your remote control and the blind goes up or down, and stops where you want it to

>Ease

No wiring or specialist skills are required, the blind can be installed just as simply as a manual blind, and without any disruption to your décor
